

ALERTCOMMANDER®

Pre-Recorded Warning and Message Delivery System

Get your pre-recorded messages and warning tones to the public or other target audience with the greatest clarity and intelligibility of any messaging system. Save lives of those who hear and clearly understand your messages.

ALERTCOMMANDER® is a feature filled pre-recorded alert tone, warning and voice message delivery system that enables the user to download audio files, record their own messages or warnings, select, manipulate and edit the messages, then project the highest quality pre-recorded sound files through **SOUNDCOMMANDER®** high power, loudspeaker systems. The **ALERTCOMMANDER** system is unique in its advanced capabilities, flexibility, portability and light weight. It includes many features and sound quality not available with MP3 players, or other messaging systems on the market.

ALERTCOMMANDER® Consists of Two Major Components

- IMLCORP's Proprietary **ALERTCOMMAND PC®** (ACPC) software program the user installs on their Windows® PC.
- A straight forward, easy to understand and operate main program screen.
- Built-in voice message recorder, to quickly record new messages or commands.
- Integral voice and file editing software.
- An external computer microphone for quick local recording of voice messages.
- A portable, light weight, hand held, ruggedized **ALERTCOMMANDER®** Output Station (ACOS) with preinstalled proprietary Android software, to store, select and play warnings and messages transferred from the ACPC sound file library on the PC.
- Two, micro secure digital (SD) cards to store audio files and backup software on the ACOS. The number and length of files that can be stored in an ACOS is only governed by the size of the micro SD card. A 2 Gigabyte card will store up to two hours of voice messages and warning tones.
- A sample selection of warning tones, sirens and voice messages.
- External auto-switching 110VAC – 230VAC – 5VDC charging unit.
- The extended life rechargeable battery will maintain the Output Station in standby mode for approximately 15 days, without recharge.

ALERTCOMMAND PC® (ACPC) Program for Windows® PC

- Download, input from external sources, or record your own warning sirens, or tactical alert tones and voice message files in any language and store them in the ACPC Source File Library on the main PC program screen for later use.

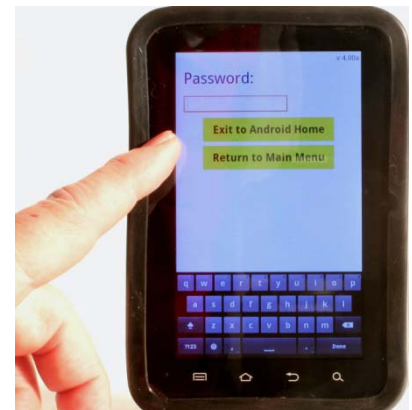

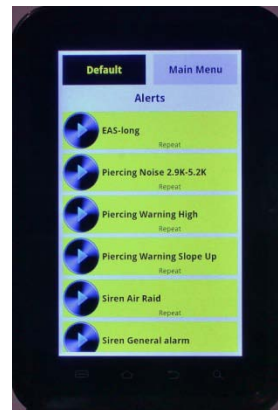

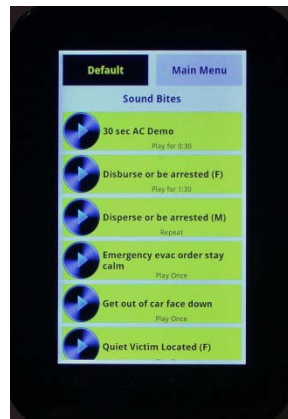

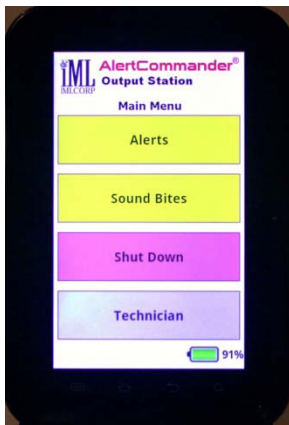

- Organize the files in to different categories
- Manipulate, rename them, add written descriptive comments, edit and improve their audio quality, and generate custom playback parameters.
- Via the program, quickly record new message files.
- Make and pre-store output file lists for future export.
- When ready, select the desired messages or warnings from the ACPC program Output List and export them to the Output Station for delivery through a **SOUNDCOMMANDER® SYSTEM**

ALERTCOMMANDER® Portable Output Station (ACOS)

The **AC Output Station** is a ruggedized light weight, hand held, or desk top, portable Android tablet computer, with a 5” touch screen from which, the operator selects and plays stored warnings, alert tones, or messages through any **SOUNDCOMMANDER® SYSTEM**. It contains:

Pre-installed Proprietary AlertCommand OS® (ACOS) Software

- Includes high resolution color touch screen technology. Just tap or roll the touch screen with a finger to locate and play files.
- The user selects the appropriate file, from either a “Warnings” folder or a “Sound Bites” folder with the touch of a finger, rolls the screen to the appropriate file, then instantly sending it to the SoundCommander with a light finger tap.
- The user can further control the output by selecting different states; Play Once, Timed Play or Play Continuously.
- A password protected “Technician” setting enables a technician to enter the system to make changes or to troubleshoot the software.

ACOS Accessories include:

- External 120/230VAC auto-switching charger / power supply.
- 3ft (.9m) output cable with XLR plug
- Mini to regular USB cable can synchronize the Output Station with the PC holding the ACPC software and upload or change out voice or warning files
- The rugged 1000 denier Cordura nylon padded soft case with shoulder strap also holds the charger and cables.
- The Output Station can be connected to a **SOUNDCOMMANDER** unit, or central base station directly via its output cable, or via a remote wireless transmitter.

For maximum capabilities and flexibility no other pre-recorded messaging system on the market compares with the **ALERTCOMMANDER®** system. Contact IMLCORP or your local dealer or distributor to learn more.
